

E-Authentication With e-mail OTP in Python

Requirements:-

1. Python 3.6 or higher
2. Internet Connection (Required for sending emails)
3. Gmail SMTP Setup
4. Python libraries
 - Tkinter
 - Smtplib
 - Hashlib
 - Random
 - Json

How to Run:-

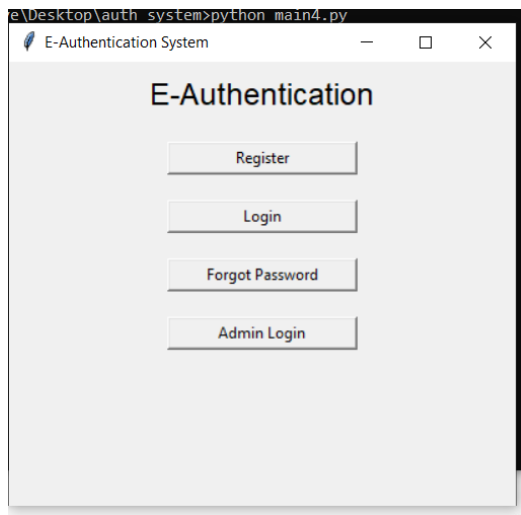

- First save the project file to 'authentication' folder
- Open the file in any editor and modify

```
SENDER_EMAIL = "youremail@gmail.com"  
SENDER_PASSWORD = "yourapppassword"
```

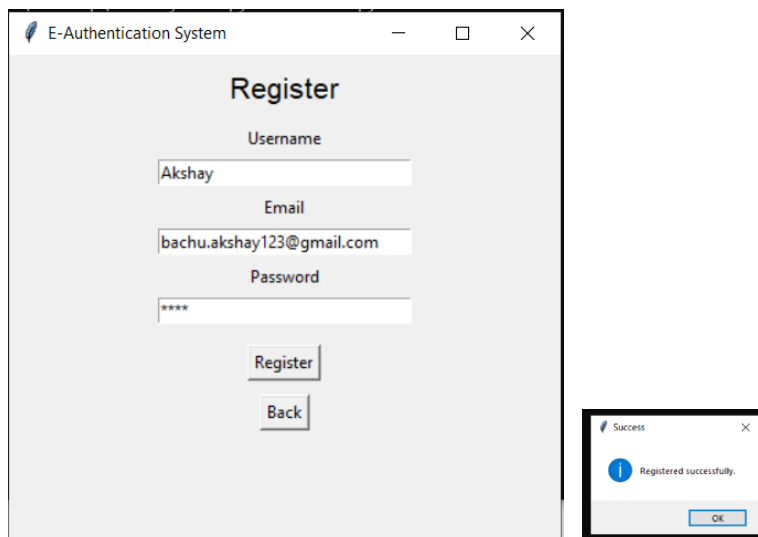

- With your gmail and app password to send otp's

- Go to: <https://myaccount.google.com/apppasswords>
- Generate a password for "GMail"
- Copy it and paste into `SENDER_PASSWORD`

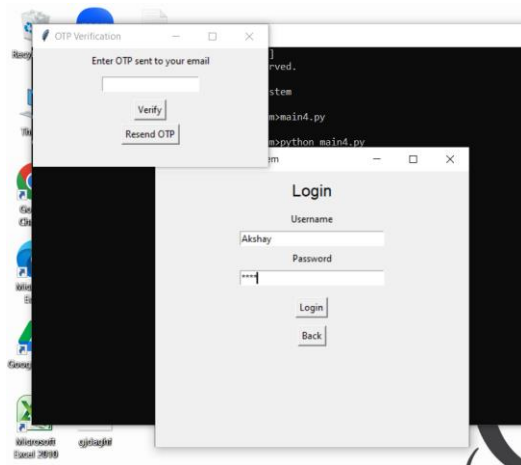

- Save the file and Open terminal/command prompt on your PC.
- Navigate to 'authentication' folder
- Run command : `python main.py`
- This opens the GUI window:

- for register click on register fill the details

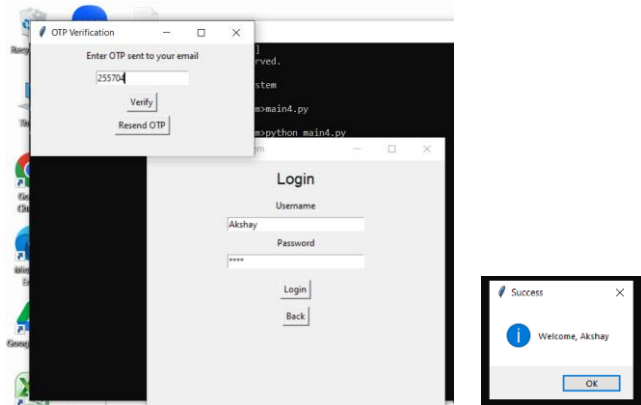

- After click on register navigate it into e-authentication and click on login

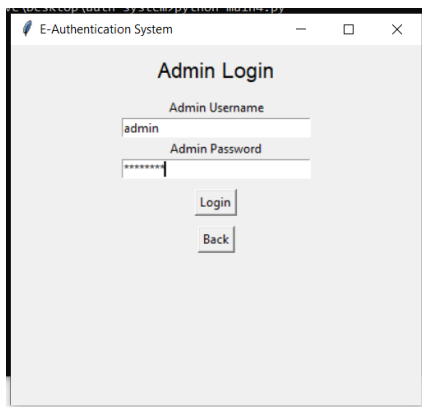

- After entering the login details you will get otp to your registered mailId

- Enter the otp in the window and click on the verify it will display the message

- for admin:- click on the Admin Login
admin username:- admin
admin password:- admin123

- after login you admin can
 - View all registered users
 - Delete users
 - Reset any user's password
